

Cambridge Xtreme, produced by IKO, is the first laminated self-adhesive shingle in the world. IKO launched and displayed this new shingle in world premiere at the BAU Munich 2015 exhibition.

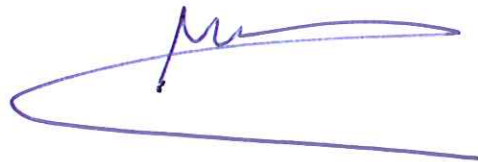

Thanks to its self - adhesive character, this strong and durable shingle withstands the most severe wind driven rain (>150 mm/h) at a wind speed of 60km / hour (norm: CEN/TR 15601:2012 – wind 47 km/h & 89 mm/h – this combination occurs once per 50 years), even on very low sloped roofs (as low as 9,5°!).

Until now, shingles have only been recommended for roof slopes between 15° (minimum) and 85° (maximum). Cambridge Xtreme exceeds the minimum slope by more than 35%! As for the maximum slope, this new shingle can even be applied on vertical walls!

So Cambridge Xtreme opens up a whole new universe of possibilities on sloped roofs: from as low as 9,5° (!) right up to 90°.
